PROFESSIONAL SUMMARY

Overall 12+ years of IT Experience. Senior Frontend Engineer with 5+ years of production experience at Intuit, building and shipping React/Redux Toolkit features used by hundreds of thousands of QuickBooks customers. Skilled in complex UI state management, component architecture and performance optimisation.

TECHNICAL SKILLS

Frontend: React, Next.js, Redux Toolkit, JavaScript (ES6+), TypeScript, HTML5 (Semantic), CSS3, Tailwind CSS, GraphQL, Responsive Design, Cross-Browser Compatibility, Accessibility (a11y / WCAG)

Tools & Infra: REST APIs, Webpack, Git, Jenkins (CI/CD), Splunk, Lazy Loading, Bundle Optimisation, Chrome DevTools, Lighthouse, Jest / Unit Testing, Storybook, AWS (Familiarity), GitHub Copilot, Cursor, Agile / Scrum

Practices: Code Reviews, Mentoring, Debugging & Troubleshooting, Design Systems, UX Patterns, OOP for Frontend

EXPERIENCE

Intuit | Bengaluru

Software Engineer 2 | Frontend | Nov 2021 – Mar 2026

Led frontend development for the QuickBooks Desktop-to-Online Migration (DTM) platform, enabling customers to migrate from legacy desktop software to QuickBooks Online. Worked primarily in React/TypeScript with Redux Toolkit for state management, GraphQL for data layer integration, and performance optimisation across the DTM frontend.

Delta Migration

- Architected end-to-end frontend workflow using React and Redux Toolkit, unblocking 117+ high-value customers from migrating accounting data into existing QuickBooks Online accounts.
- Designed complex multi-state UI flows across qbo-desktop-widget-ui and beanstalk repositories, handling diverse failure and partial-match scenarios with zero regression on existing migration flows.
- Implemented partial matching logic and data visualisation for transaction splitting, processing 2,700+ transactions successfully — built entirely in React with custom component architecture.

Readiness Agent

- Led UI integration for the Readiness Agent, connecting intelligent AI responses to a personalised pre-migration frontend experience.
- Reduced pre-migration data issues for 426+ companies (unbilled charges) and 305+ companies (inactive vendors) within 30 days of launch — driven by frontend UI flows that surfaced AI recommendations in context.

Performance and Architecture

- Migrated critical infrastructure from IDMapper to Federation Link Service (GraphQL), securing approximately 3,750 daily requests with zero downtime — required deep frontend-to-API contract ownership.
- Engineered Large File Migration solution with chunked upload in the frontend and backend, extending support from legacy 2GB to 5GB files.
- Improved qbo-dtm-app frontend performance via lazy asset loading, reducing bundle size and optimising Page Ready Markers for faster time-to-interactive.
- Recognised with Spotlight Awards for delivery excellence across IES DFY, Readiness Agent, and Performance Improvement programs.

Elektrobit India Pvt Ltd | Bengaluru

Senior Engineer — Embedded / C++ | Sep 2018 – Nov 2021

- Developed sensor fusion algorithms for ADAS (Static Object Detection) in C++; optimised real-time camera and radar processing pipelines for Volkswagen and BMW.

Robert Bosch | Bengaluru

Senior Engineer — Embedded / C++ | Jun 2014 – Sep 2018

- Built safety-critical brake assist systems validated to international NCAP standards, deployed in JLR and Honda production vehicles.

EDUCATION

IIT Delhi — M.Tech, Instrument Technology | CGPA: 8.67 | 2012 – 2014

YMCA University — B.Tech, Electronics & Instrumentation | CGPA: 9.02 | 2008 – 2012
